

Fillguard Plus, digital water meter and conductivity meter for Fillsoft

Article number: 9131058

Thinking solutions.

Features

Type	Fillguard Plus
Operating temperature	60
Max. perm. operating pressure	10 bar
Height	81 mm
Width	83 mm
Depth	70 mm
Weight	0.40 kg

Description

Fillguard Plus

Water meter for monitoring softening and demineralisation systems for heating water treatment (e.g. Fillsoft or Fillsoft Zero) or control of pumps, valves or systems during filling and draining of containers, etc.

The Fillguard Plus is an electronic water meter for measuring total water volumes and volume flows, as well as for counting down of a programmable specified water volume with limit value signalling by means of a pulse output or analogue signal. The Fillguard Plus also has an integrated sensor for monitoring the capacity state of demineralisation cartridges in the treatment of filling and make-up water for heating systems. Particularly suitable in conjunction with Fillsoft Zero for implementation of low-salt running according to VDI 2035. The Fillguard Plus continuously determines the conductivity of the demineralised water and outputs it via an integrated display; value checking and programming via a plastic foil keyboard. Voltage supply via supplied fully-wired 1.5 m long connection cable.
