

Safecontrol for Fillset and Fillcontrol

Article number: 7131422

Features

Weight	0.60 kg
--------	---------

Description

The Fillset Safecontrol expands your Fillset system with a robust and dirt-resistant actuator motor that can be easily connected to the motor mount of the Fillset Standard, Fillset Combi or Fillcontrol Smart models. If there is a loss of power, the actuator motor is closed by the force of a spring, which provides additional safety. Both the hydraulic and the electrical connection are made on-site, while actuation can take place flexibly via the Fillcontrol Smart or a separate control unit.

This solution provides reliable and efficient automation for your filling systems.
